## Smoked products:

The smoking process naturally highlights the color differences caused by fluctuations in the tannic acid content of the tree. Due to the change in pH during the smoking process, these tannins react with the atmospheric oxygen, which causes the desired color changes. Since the pH value does not suddenly change at the end of the smoking process and atmospheric oxygen is also omnipresent, natural post-ripening processes occur. These ripening processes subside in the first few months until the desired color is achieved.

This play of colors can be seen on a small scale within a plank and over a large area from one plank to another.

Due to nature and depending on the origin of the wood, different dimensions may have different colour shades although having the same colour basis.

## Natural colour changes:

All Admonter floors are a natural product and will over time change colour. Depending on the amount of exposure your floor has to sunlight, lighter timber will turn darker and darker timber will become lighter. This change is most pronounced in the first 3-6 months.

lightly smoked natural oiled

lightly smoked untreated

untreated

freshly  
produced

mature or rather  
natural colour  
changes
